# MATERIAL AND COMPONENT FEATURES

To enter the Corradi production cycle, materials must pass all tests required by the Company's Quality System.

**The features listed below identify the peculiarities of the materials and therefore should not be understood as manufacturing defects, with the exception of the cases noted in the non-conformity/defect column.**

Warnings:

For complaint and warranty terms, see the Warranty chapter.

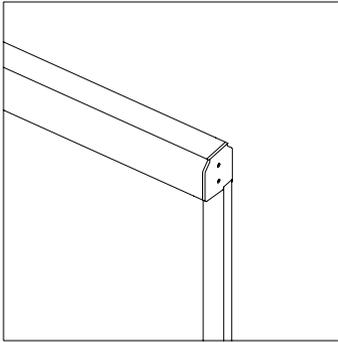

Any change made to the product not expressly authorised by Corradi voids the warranty.

<b>General</b>	<b>Product features</b>
	The framework is not watertight. During particularly violent storms with strong wind some water infiltration is possible.
	Structures situated in urban environments are subjected to pollutants (smog, acid rain), smoke from chimneys, cooking fumes, and inclemencies of the weather in general. Therefore it is normal for the canvas and the framework to get dirty. Frameworks and canvas are not self-cleaning.
	Product features: check that there are no obstacles that may prevent the correct awning movement; this may cause a malfunctioning of the devices.
<b>Canvas</b>	Depending on the installation conditions it is possible for the canvas to get dirty (pollutants, smoke from chimneys, smog, etc.). In this case it may be necessary to clean the canvas more frequently, as explained in maintenance chapter.
	The canvas is not immune from burning caused by cigarette butts, etc.
	In particular situations it is possible for condensation to form in the inner part of the canvas. To limit this condition keep the area well ventilated.
	The appearance of mould in the canvas embossing is due to the presence of humidity on the canvas which favours the growth of micro-organisms. It is therefore necessary to clean the canvas at regular intervals, more frequently where necessary.
	Canvases made at different times may show colour variations due to the production process.
	The presence of creases does not compromise the quality of the product. "Web-like" creases may form on the canvas fabric due to the production process, use, exposure to the weather and natural ageing of the fabric. "Wave-like" creases may form near seams and/or seals due to the double thickness of the canvas fabric, which creates different tensions when rolled up in the roller.
<b>Cristal</b>	The product features described in "Canvas" apply.
	The aesthetics and durability of a Cristal canvas are influenced by environmental and usage factors.
	There may be areas with different light diffraction.
	When a not completely dry canvas is rolled up in the protection cassette, opaque haloes may form on the fabric.
	Scratches and abrasions on the canvas are also possible.
	Yellowing of the Cristal canvas is a characteristic of its natural ageing process.
	At low temperatures, the canvas shrinks and creases are possible. Handling is permitted by accompanying the terminal. At high temperatures, the canvas expands and creases are possible. Handling is permitted by accompanying the terminal. In the central section of the canvas, creases are possible due to the presence of seals. The presence of creases is a natural characteristic of the fabric and its natural ageing process.

# **ERMETIKA<sup>®</sup> CRISTAL XL, DIFFUSA ETK<sup>®</sup> XL**

# ERMETIKA® CRISTAL XL AND DIFFUSA ETK® XL FEATURES

ERMETIKA® XL is a vertical roll-up screen on guides custom made to protect against sun, wind and rain, comprising an aluminium structure and a folding canvas. It can be installed on Corradi sun-shading systems, existing structures, outdoor passageways or with the Corradi Balcony system.

ERMETIKA® XL has been specially designed to handle the issues relating to strong retraction % of Cristal Fabric, improving the dimensional performance of ERMETIKA® and fully integrating the canvas connection and packing systems into its aluminium structure, for a 100% Cristal surface. The box with safety fastener is accessible for inspection and maintenance of the larger wind-up device tube (diam. 78 mm).

The larger guides (dim. 85x33 mm) are reinforced and can be dismantled. They house a system of prestressed stainless steel wire springs that keep the canvas tensioned, improving the functional and aesthetic performance of the product.

The manual version of ERMETIKA® XL is operated using a gearbox, which avoids inverse rolling of the canvas and canvas detachment; in the motorized version the canvas is controlled by means of a 220 Volt motor-reducer (electric drive) with built-in receiver.

The stop system of the Telescopic Terminal (standard), positioned at the lower part of the side guides, enables the canvas to be tensioned during the descent and rights the guides if they are out of square by up to 2 cm

A manual mechanical locking system (optional) built into the terminal is available.

Canvas may be manufactured in the following fabrics: transparent Cristal (sun-wind protection), micro-perforated Sunworker or Soltis86, Soltis W96, (sun protection), shading Eclissi, Lac and Tempotest (sun-wind-rain protection) and also mosquito screen, all up to max 5 metres wide.

# MAGIKO<sup>B</sup>

# MAGIKO<sup>B</sup> FEATURES

Magiko B is a vertical closure custom-made with the purpose of protecting from sun, rain and wind. Magiko B is made of aluminium and consists of: runners (33x33 mm or 33x45 mm), roller tube with different diameters (Ø78/85/100 mm depending on the width), a roll-up canvas and a container protection cassette (11x12 or 12x13 cm). Magiko B is made of darkening or filtering fabric. Magiko B is compatible with Corradi products and can be integrated into the beam of MAESTRO and IMAGO® in the SWING version.

The modular side runners are equipped with a canvas retaining system and are available in two different sizes (33x33 and 33x45 mm). The 33x45 mm runners were developed for the manual version with gearbox movement and for compensation of up to 1 cm per side in case of application in uneven spaces. The protection cassette with safety lock can be inspected for check and maintenance of the roller tube. In the motor-driven version, the system is driven by a 220 Volt motor-reducer (electric drive) with integrated receiver. In the lower part of the removable protection cassette it is possible to apply a full-width LED light with 45° orientation towards the inside of the structure. Two protection cassettes are available for Magiko B (sizes 11x12 and 12x13 cm) to be chosen according to the height of the space and the pergola on which the closure is to be installed. The maximal dimensions of the screen vary depending on the protection cassette and the desired dimensions. The canvas is available in the following fabrics: Sunworker, Soltis 86, Soltis W96, Glassrope, Eclissi, Lac 650 SL, Precontraint 302 Satin, Precontraint 302 Satin, Stam 6002 and Insect Screen.

# MAGIKO<sup>B</sup> PLATES READY FOR RUNNERS CONNECTION

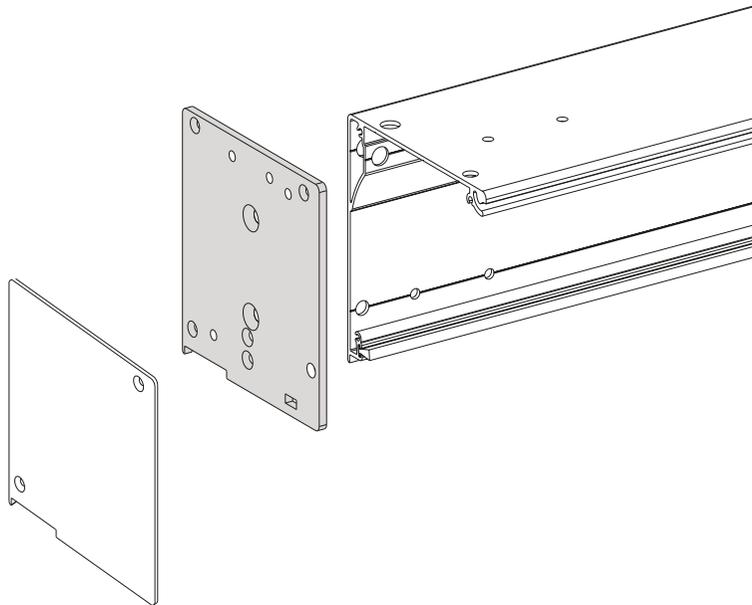

The following plates are available for both the manual and motor-driven version.

The plates ready for runners connection have been designed to facilitate the installation of MAGIKO B in certain situations.

This is possible thanks to the bayonet feature that allows the runners (fixed profile) to be pre-fastened to the protection cassette (fixed profile) using only 6 screws. In this way, the protection cassette and runners will be a single piece to be assembled at the same time, minimising position mistakes.

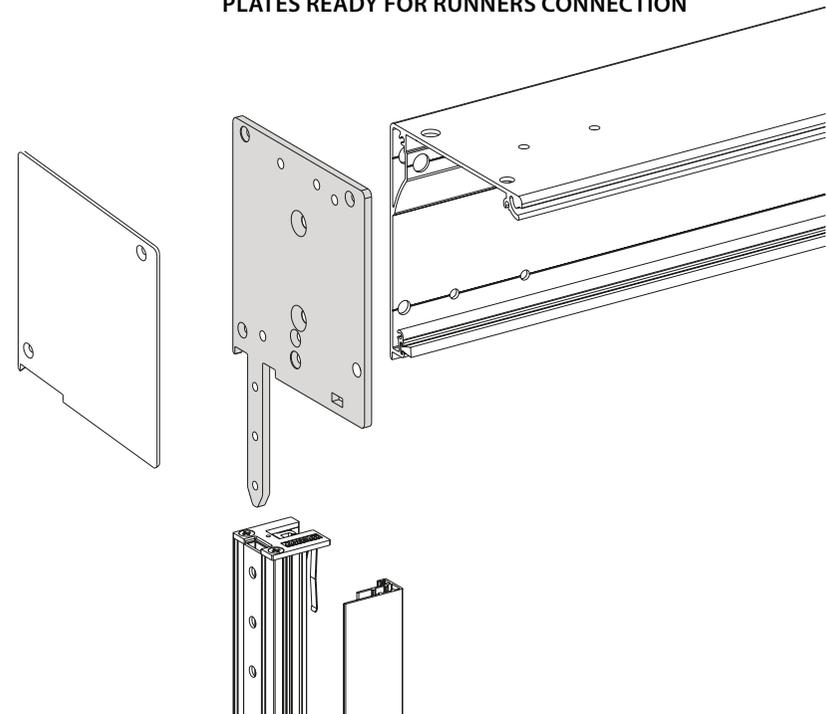

**NOTE These plates must be ordered together with the structure.**

**STANDARD PLATES**

The system provides for the assembly of the protection cassette in the compartment and the subsequent runner assembly.

**PLATES READY FOR RUNNERS CONNECTION**

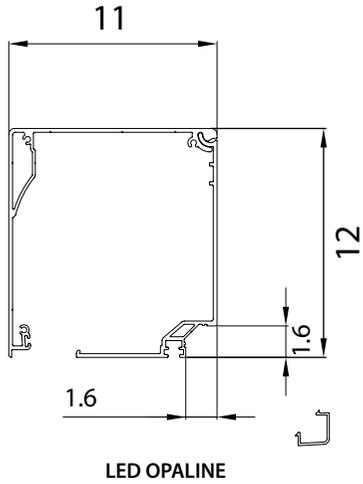

The system provides for the assembly of the protection cassette with plates with runners on the floor and the subsequent positioning of the freestanding frame in the compartment.

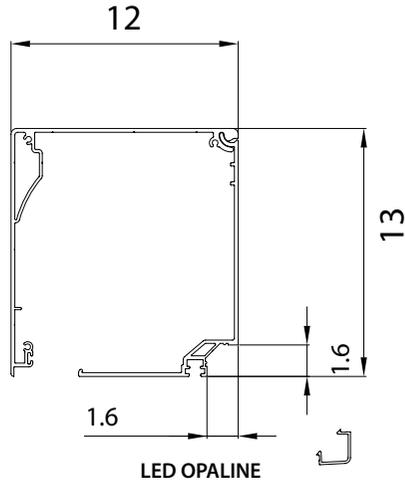

**NOTE These plates will be supplied as standard with the “compensation profiles” option.**

# MAGIKO<sup>B</sup> DIMENSIONS

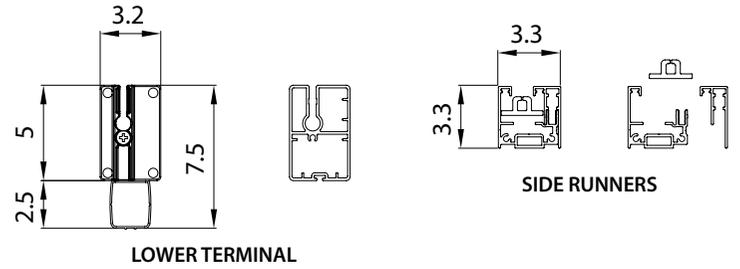

**MAGIKO B 11**  
PROTECTION CASSETTE 11x12 cm

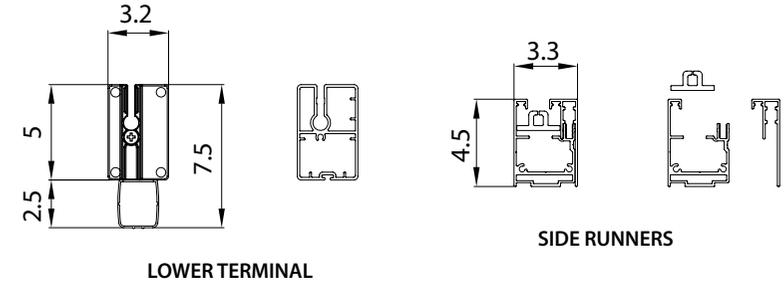

**MAGIKO B 12**  
PROTECTION CASSETTE 12x13 cm

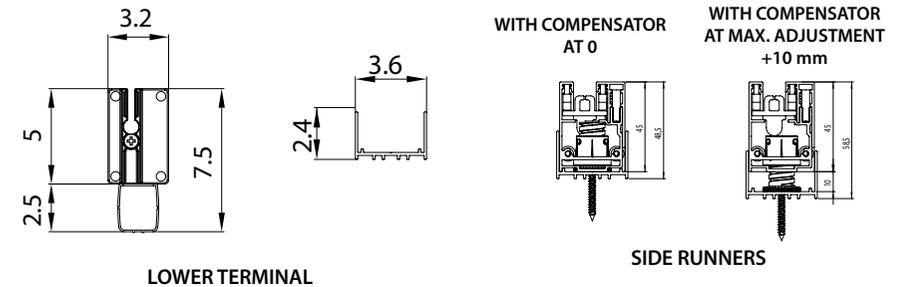

**RUNNER 33x33 mm - motor-driven**

**RUNNER 33x45 mm - with compensation profile for manual or motor-driven configuration**

## GASKETS

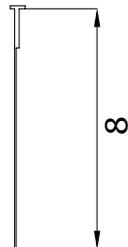

**DRAUGHT PROTECTION GASKET**

Grey PVC draught-proof gasket, placed on Magiko B terminal

**BALLOON-PROFILE GASKET**

Black EPDM balloon gasket, dimension 5 mm, placed on Magiko B terminal

**TERMINAL PELMET**

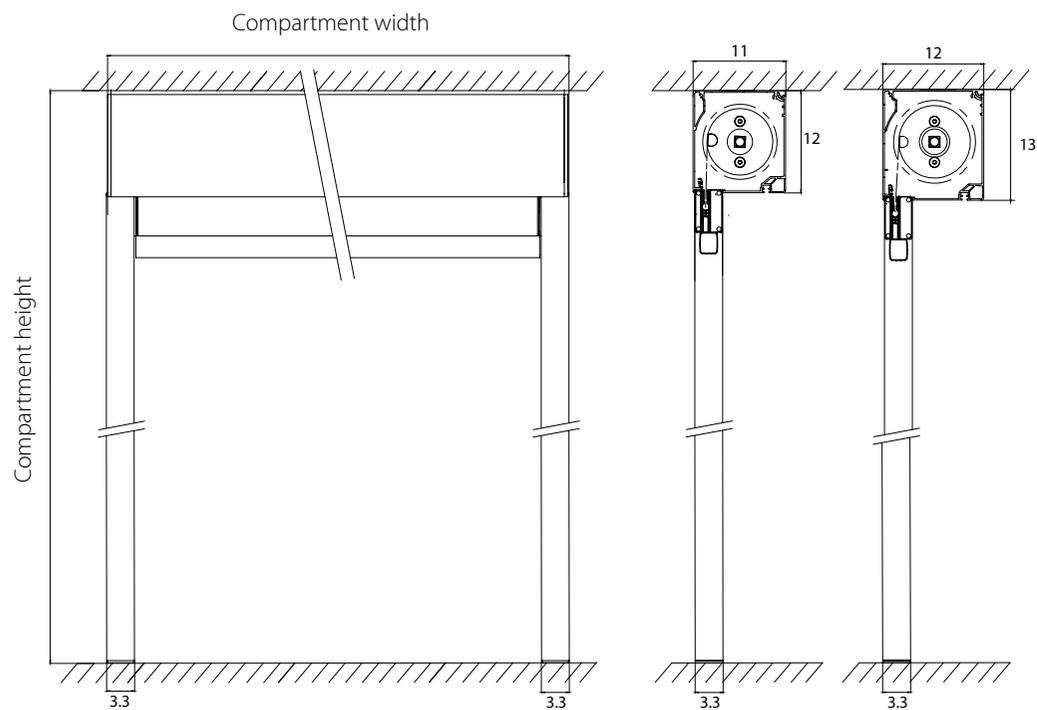

*(optional)*  
Cristal fabric pelmet, height 8 cm, placed on Magiko B terminal

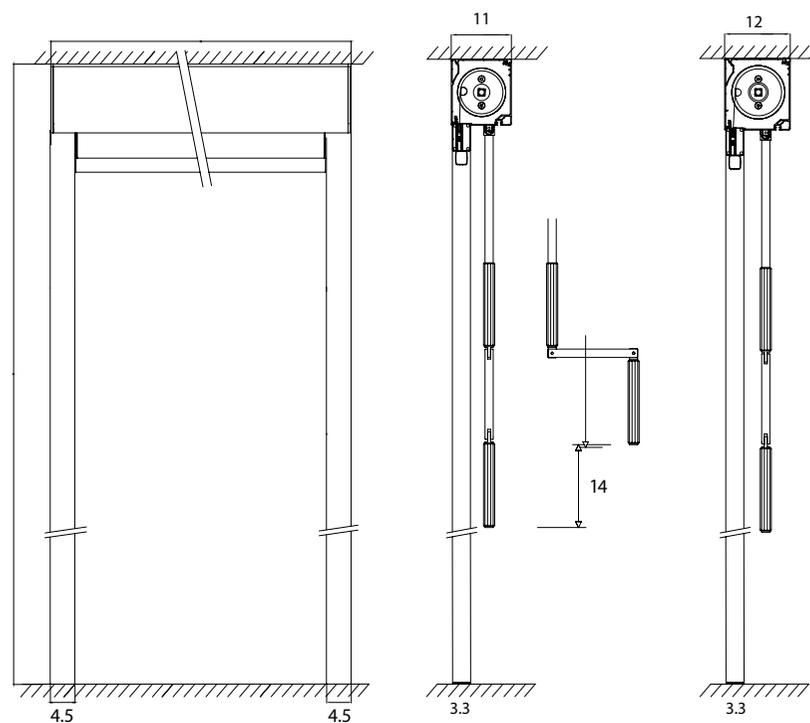

**GASKETS FOR WALL COMPENSATION**  
*(standard for side or ceiling fastening)*  
up to 2 mm

All measurements are given in cm

**RUNNER 33x33 mm - motor-driven**

**RUNNER 33x45 mm - manual**

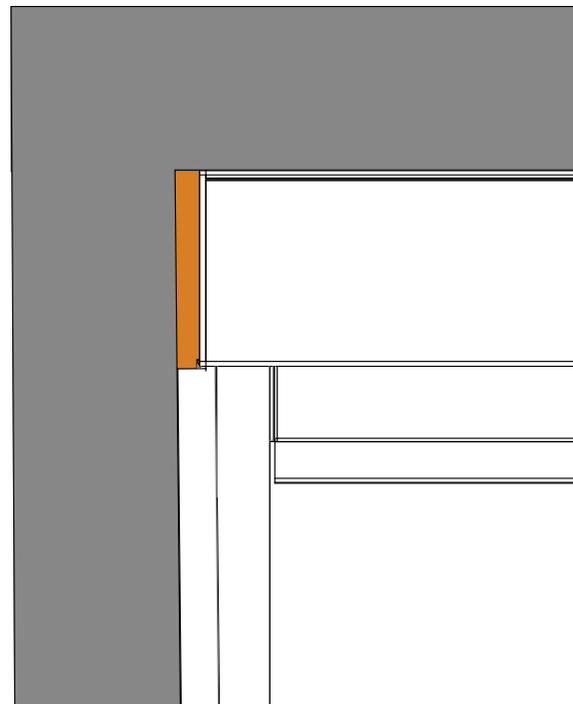

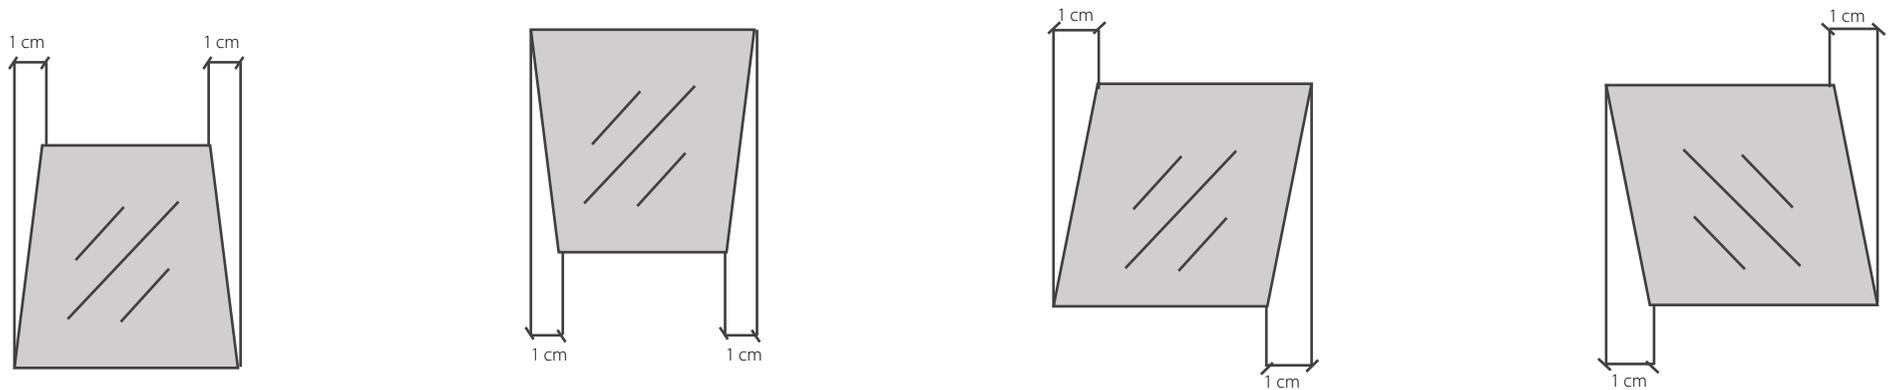

All measurements are given in cm

# MAGIKO<sup>B</sup> COMPENSATION PROFILES

With the use of an additional profile and special "screw" compensators, MAGIKO B allows the installation in spaces with an off-size value of up to 1 cm per side.

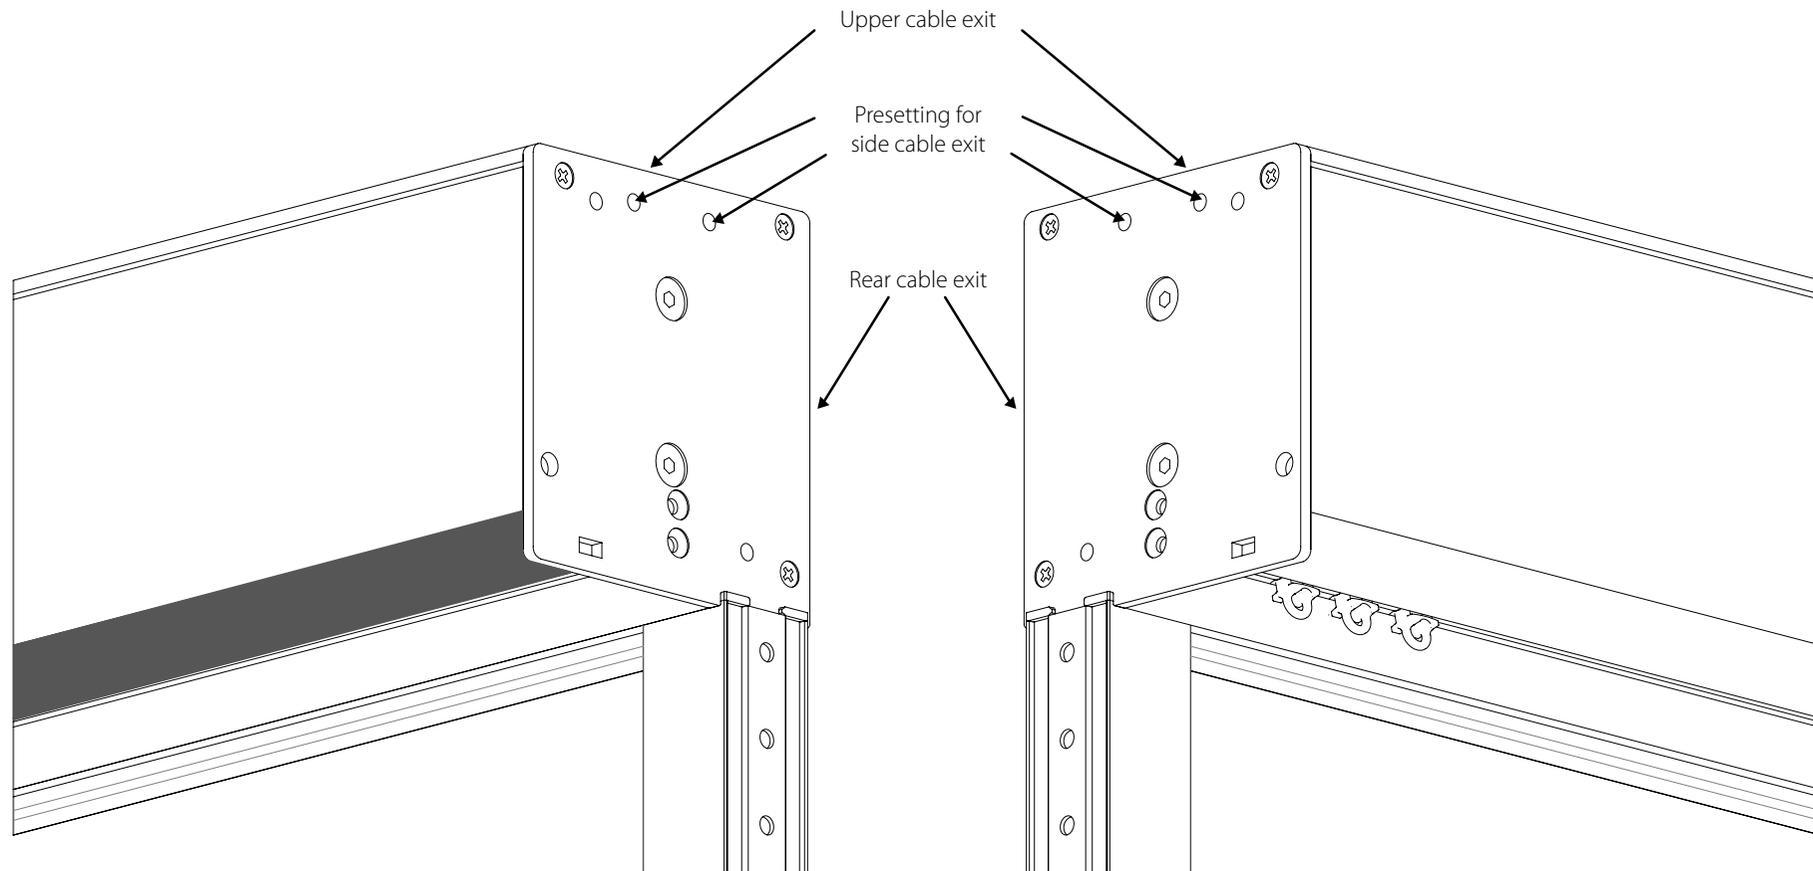

**NOTE** For these configurations, plates ready for runners connection will be supplied as standard for correct installation of the system.

**This option is only available when installed in any compartment with side or overhead anchorage (not frontal). Not available for Corradi structures.**

\*ATTENTION: the protection cassette will always be supplied in the smallest size so that the canvas is always perfectly tensioned.  
The installer will assess whether and how to close the remaining space between the protection cassette and the surface of the compartment.

# MAGIKO<sup>B</sup> SUPPLEMENTS

## **S46** Lights

Warm or cold white LED light (3000 K - 5700 K) inserted in the corner of the removable protection cassette.

Note: The power supply unit and the control unit - if any - for remote switching on control must be housed in an outer space with respect to MAGIKO B encumbrance, as the space in the protection cassette is not sufficient to contain such accessories.

**\* Warning:** optional S64 cannot be installed in the following configurations:  
Motor-driven MAGIKO B 11: compartment height higher than 280 cm.  
Motor-driven MAGIKO B 12: compartment height higher than 320 cm.  
Manual MAGIKO B 11-12.

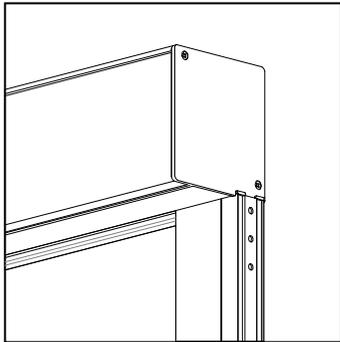

## **G1** Sliders for Indoor Awning

Number 20 awning sliders already fitted inside the removable protection cassette.

# BRIO<sup>S</sup>

# BRIO<sup>S</sup> FEATURES

BRIO S is a custom-made vertical closure that can be rolled up on runners and designed for protection from sun, rain and wind. BRIO S is made of aluminium and consists of 33x66 mm runners, roller tube with different diameters (Ø78/85/100 mm depending on the width), a roll-up canvas and a container protection cassette (11x12 or 12x13 cm). BRIO S is made of transparent or filtering or darkening fabrics. BRIO S is compatible with Corradi products and can be integrated into the beam of MAESTRO and IMAGO® in the SWING version. The modular 33x66 mm side runners are equipped with a canvas retaining system.

The protection cassette with safety lock can be inspected for check and maintenance of the roller tube. In the motor-driven version, the system is driven by a 220 Volt motor-reducer (electric drive) with integrated receiver. In the lower part of the removable protection cassette it is possible to apply a full-width LED light with 45° orientation towards the inside of the structure. Two protection cassettes are available for Magiko B (sizes 11x12 and 12x13 cm) to be chosen according to the height of the space and the pergola on which the closure is to be installed. The maximal dimensions of the screen vary depending on the protection cassette and the desired dimensions.

The telescopic locking system supplied as standard works best on BRIO S in Cristal fabric allowing for optimal tensioning of the canvas and preventing the accidental lifting of the closure. The lock acts through horizontal sliding, ensuring superior durability thanks to the presence of AISI 304 stainless steel components in the mechanism. In addition, the possibility of adjusting the lock striker by up to 1 cm lends the system innovative features. The contact point of the block can be positioned at variable height using an additional component (on request) to compensate for the slope of the floor. A manual mechanical locking system (optional) incorporated in the terminal is available.

Canvas available in the following fabrics: Cristal, Cristal M2 (transparent) and Cristal RES (smoke-tinted), Sunworker, Soltis 86, Soltis W96, Glassrope, Eclissi, Lac, Precontraint, Stam and up to 4 metres wide Mosquito Net (filtering).

**List of available colours:**

# BRIO<sup>S</sup> PLATES READY FOR RUNNERS CONNECTION

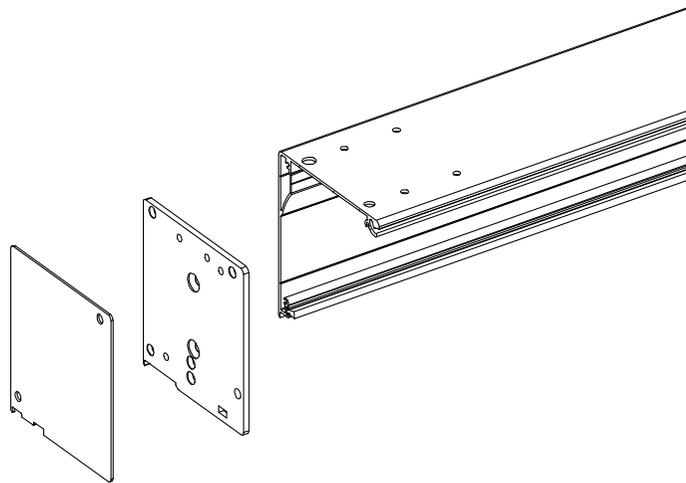

The following plates are available for both the manual and motor-driven version.

The plates ready for runners connection have been designed to facilitate the installation of BRIO S in certain situations.

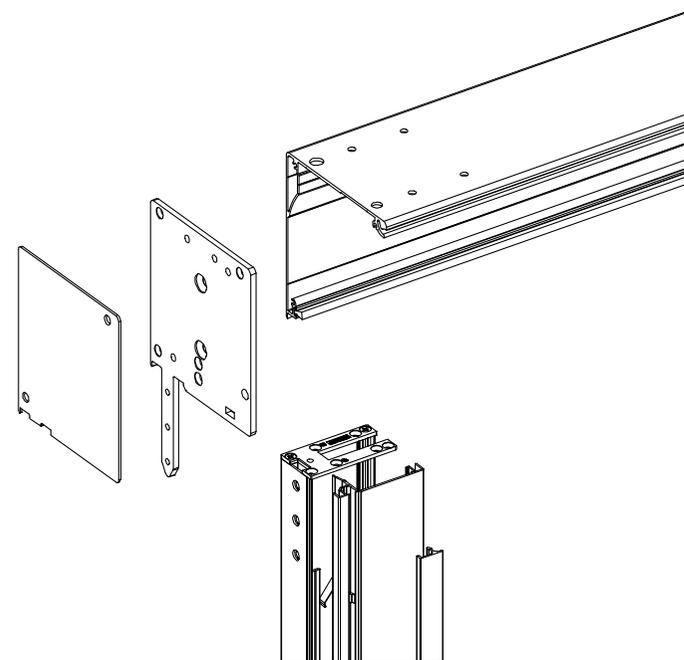

This is possible thanks to the bayonet feature that allows the runners (fixed profile) to be pre-fastened to the protection cassette (fixed profile) using only 6 screws. In this way, the protection cassette and runners will be a single piece to be assembled at the same time, minimising position mistakes.

**NOTE: These plates must be ordered together with the structure.**

**STANDARD PLATES**

**PLATES READY FOR RUNNERS CONNECTION**

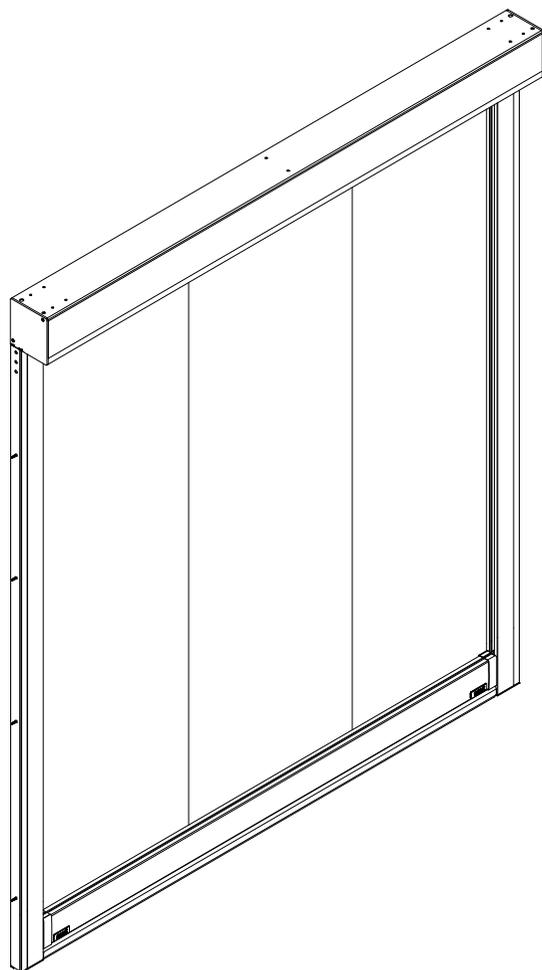

The system provides for the assembly of the protection cassette in the compartment and the subsequent runner assembly.

The system provides for the assembly of the protection cassette with plates with runners on the floor and the subsequent positioning of the freestanding frame in the compartment.

Cristal fabric pelmet, height 8 cm, placed on Brio S terminal

All measurements are given in cm

## **S46** Lights

Warm or cold white LED light (3000 K - 5700 K) inserted in the corner of the removable protection cassette.

Note: The power supply unit and the control unit - if any - for remote switching on control must be housed in an outer space with respect to BRIO S encumbrance, as the space in the protection cassette is not sufficient to contain such accessories.

**\*Please notice:** optional S46 cannot be installed with the following configurations:

BRIO S 11: compartment height above 280 cm

BRIO S 12: compartment height above 320 cm

BRIO S with optional LED light, in front of Palladia®, is not recommended as when the structure is closed the light is covered by the mobile gutter.

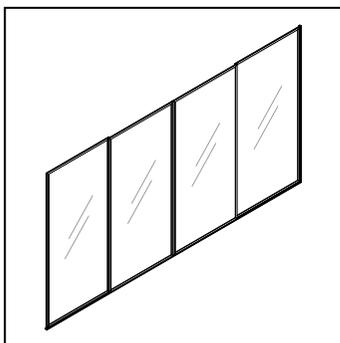

## **CT1** Sliders for Indoor Awning

Number 20 sliders already fitted inside the removable protection cassette.

# MYGLASS

# MYGLASS FEATURES

All glass sliding door is a horizontal sliding system custom made to protect from wind and rain, to be installed on Corradi structures, existing structures, balconies or terraces, consisting of an aluminium structure and glass doors.

The 2- to 4-way frame with collection of all the doors near the first one, allows opening most of the surface. The structure consists of extruded aluminium section bars. Epoxy powder coating except for the lower runners, available in anodised version only.

The glass (in accordance with UNI EN 12210:2016 – RESISTANCE TO WIND LOAD – NC1) is a safety single tempered sheet, HST tested and 10 mm thick.

Between the glasses a PVC gasket can be present, that ensures a better tightness.

The sliders are equipped with double wheel, supported by ball bearings, fitted on rocker arms that allow simultaneous adherence to the rail, making sliding extremely smooth. The sliders can be adjusted in height up to 5 mm and have a maximum load capacity of 100 kg/door.

## List of available colours:

- RAL 9010 White glossy/matt/texture
- RAL 1013 Ivory glossy/matt
- RAL 7035 Grey glossy/matt
- RAL 8019 Brown glossy/text
- Anthracite texture
- RAL 9016 White plus matt
- Dark Bronze texture
- RAL 7016 Dark grey texture
- RAL 9005 Night texture
- Salt & Pepper texture
- Titanium texture
- Cor10 texture
- RAL K7 glossy/matt/texture
- Spring green texture
- Graphite texture
- Dove-grey texture

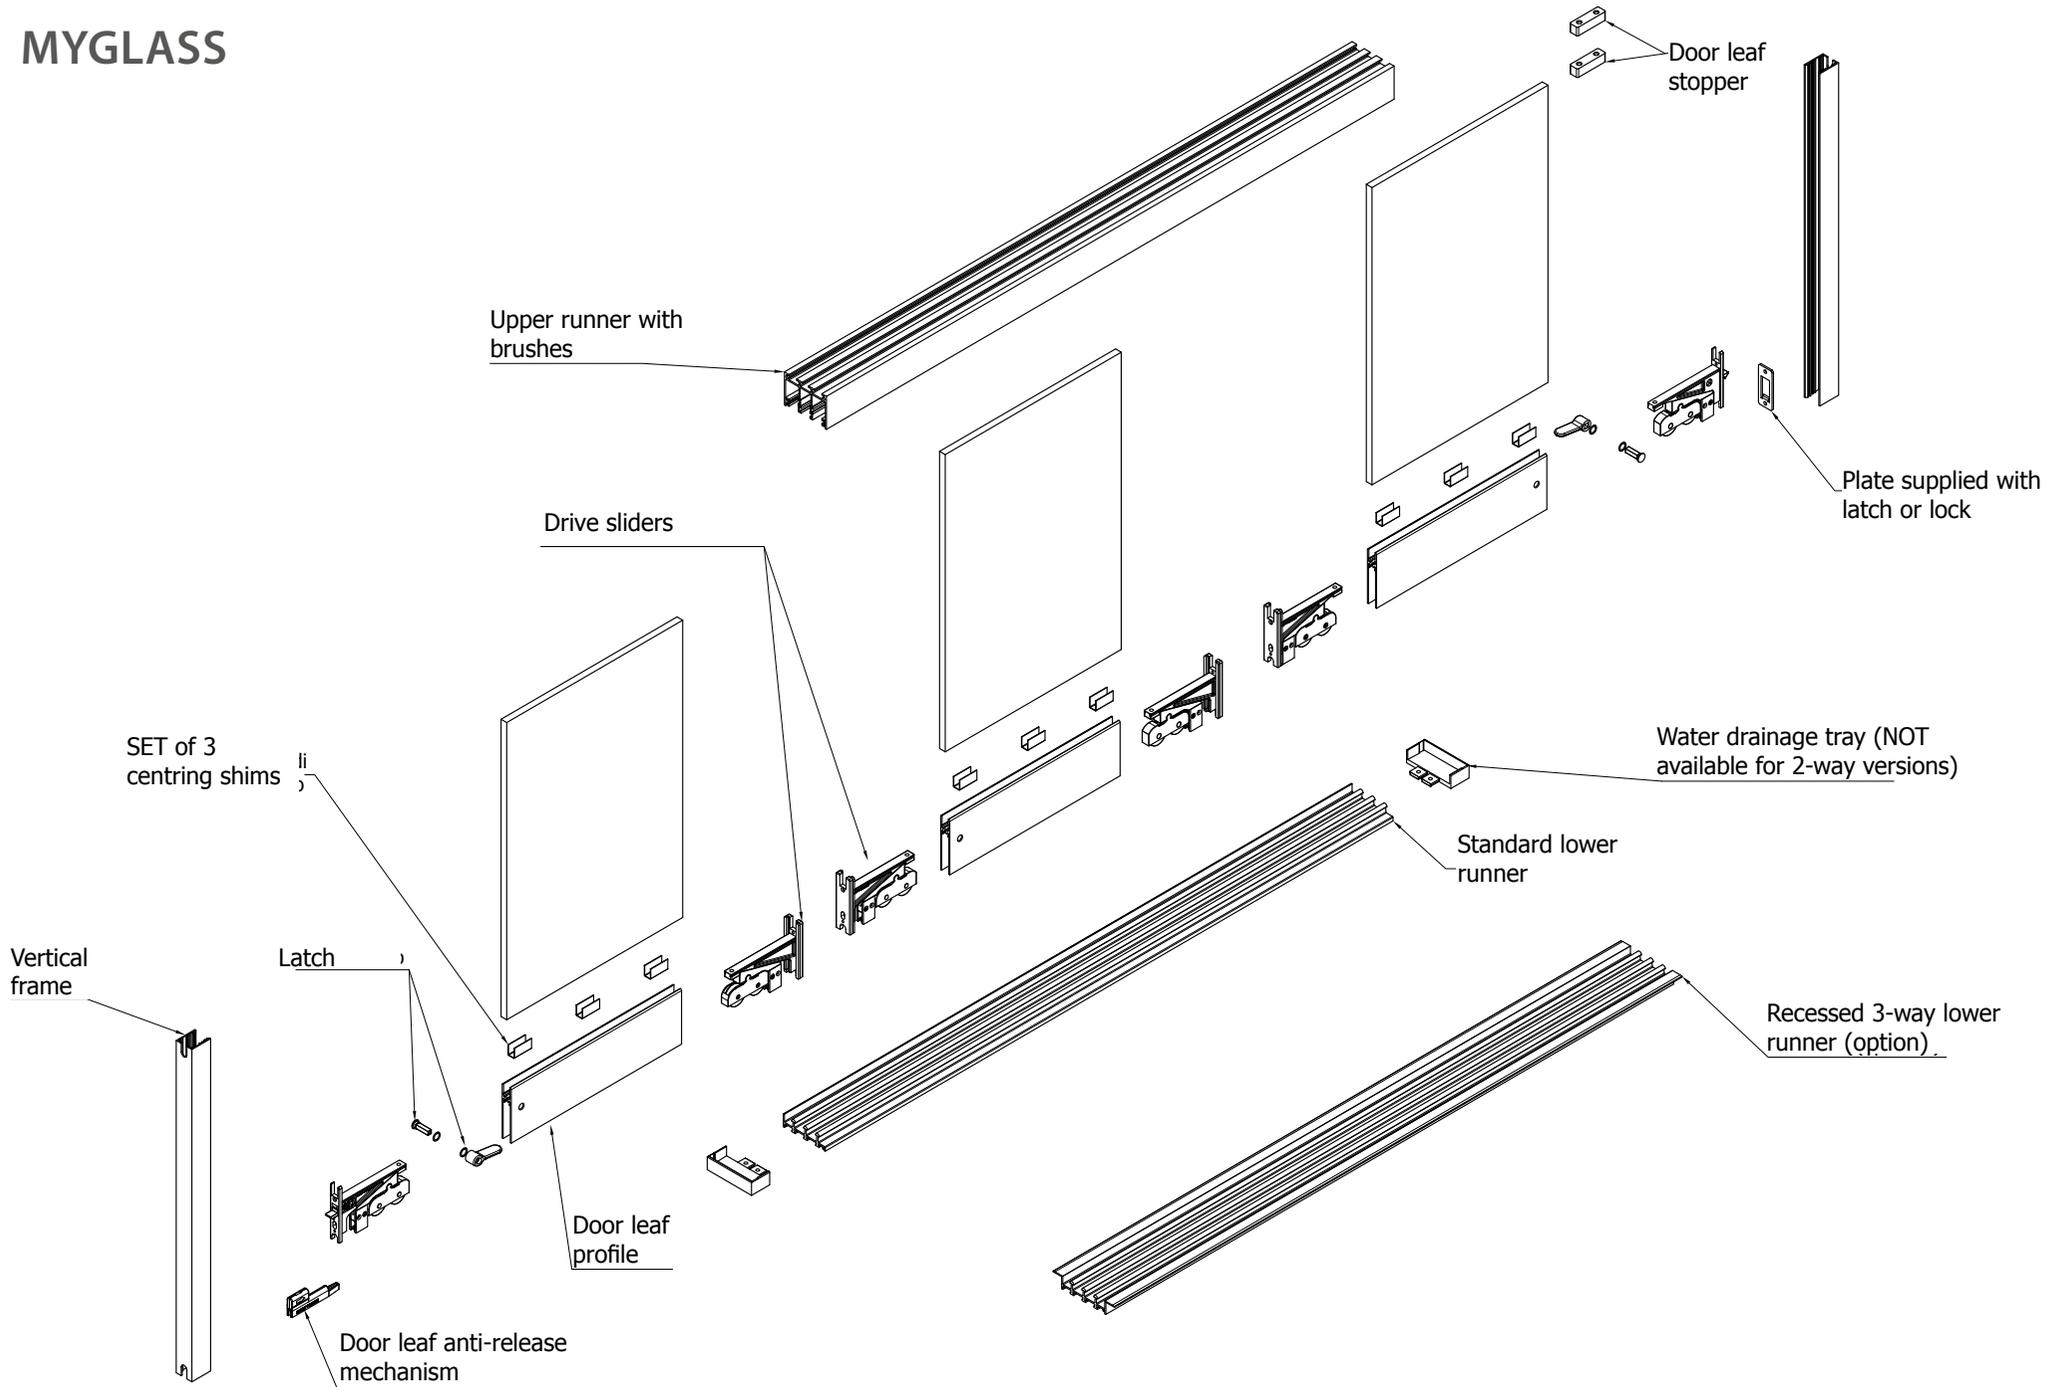

\*See the Corradi sample kit for other fabrics.

## MAXIMAL DIMENSIONS FOR SYSTEM

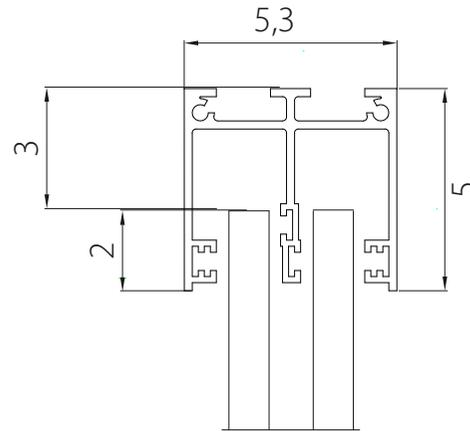

2 ways 2 doors	300 x 260 cm
3 ways 3 doors	475 x 250 cm
4 ways 4 doors	600 x 260 cm
2 ways 4 doors	600 x 260 cm
3 ways 6 doors	950 x 250 cm
4 ways 8 doors	1000 x 300 cm

**NB.** To facilitate the installation, the finished dimensions are reduced by 0.2 cm from the ordered compartment size.

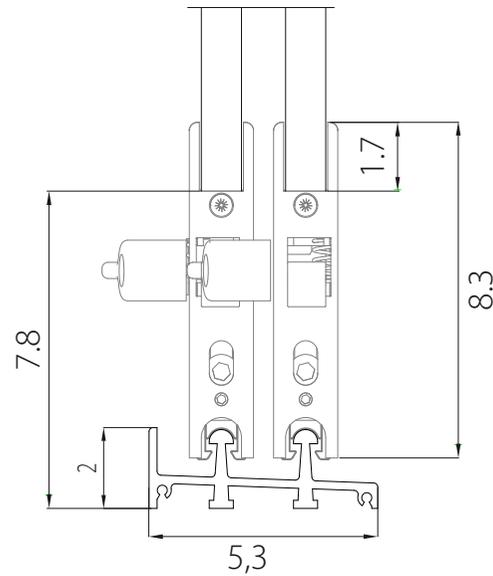

# MYGLASS

# MYGLASS 2 WAYS 2 DOORS / 2 WAYS 4 DOORS DIMENSIONS

UPPER PROFILE CROSS-SECTION

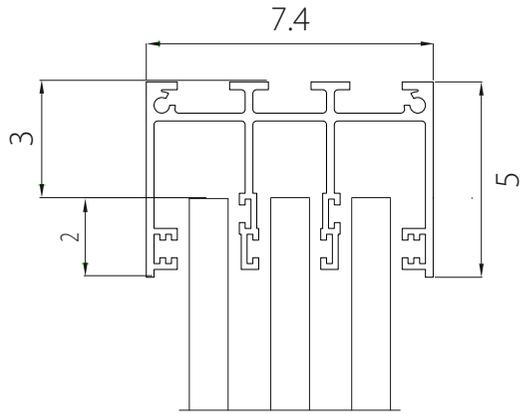

LOWER PROFILE CROSS-SECTION (standard)

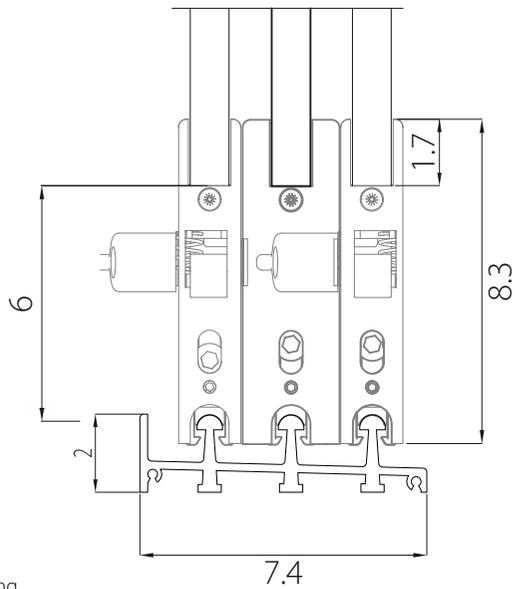

PLATE NOT PRESENT

The values indicated are expressed in cm

# MYGLASS 3 WAYS 3 DOORS / 3 WAYS 6 DOORS DIMENSIONS

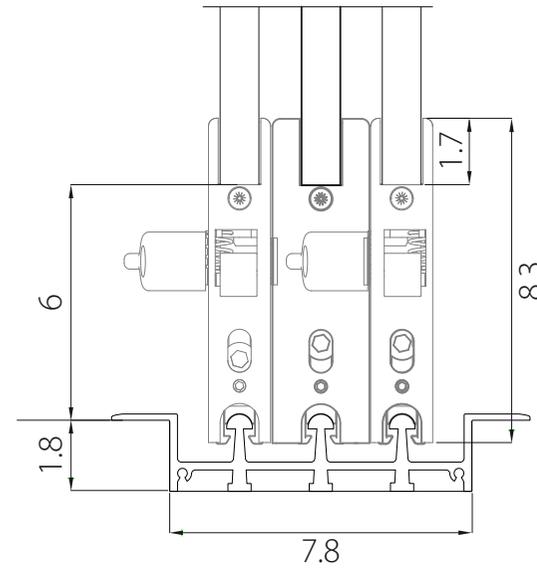

UPPER PROFILE CROSS-SECTION

LOWER PROFILE CROSS-SECTION (standard)

With the standard runner, interlocking water collection and drainage trays are supplied as standard.

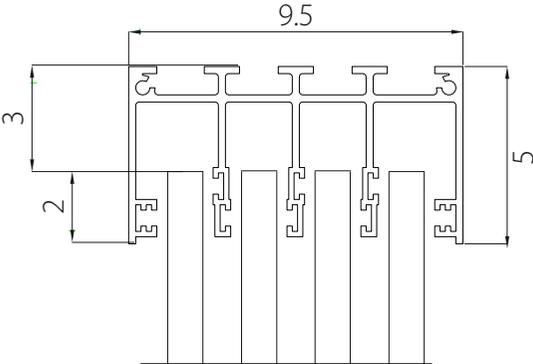

BUILT-IN LOWER PROFILE CROSS-SECTION  
Required for installation on Imago with Domino

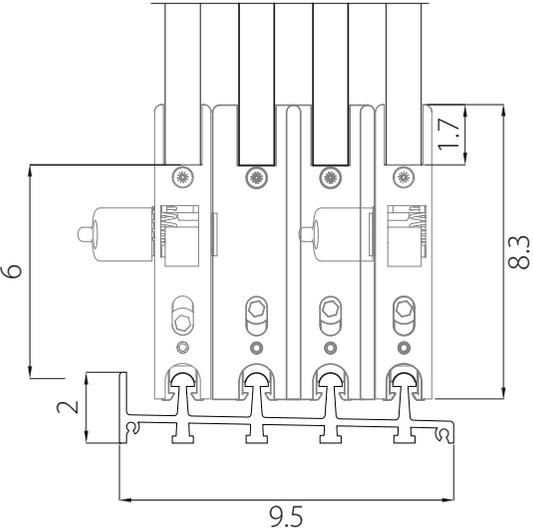

In the case of the recessed runner, no water trays are supplied, but the customer may choose to drill the runner downwards to allow water to drain off.

The values indicated are expressed in cm

# MYGLASS 4 WAYS 4 DOORS / 4 WAYS 8 DOORS DIMENSIONS

UPPER PROFILE CROSS-SECTION

LOWER PROFILE CROSS-SECTION (standard)

With the standard runner, interlocking water collection and drainage trays are supplied as standard.

The values indicated are expressed in cm

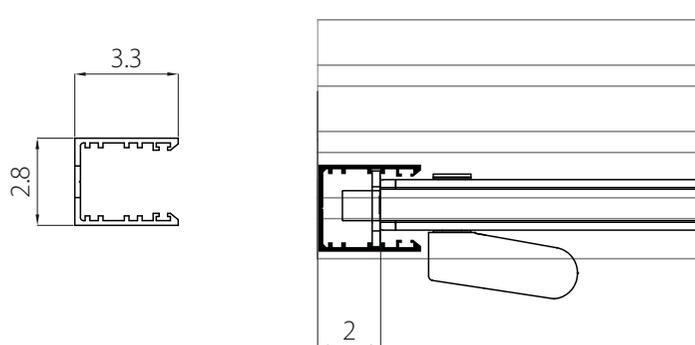

# MYGLASS DIMENSIONS OPTIONAL

## VERTICAL FRAME

**Attention:** it is mandatory to insert this option in case of handles with lock or locking system with latch, positioned against the pillar.

In this case the PVC ball gasket, supplied as standard, is not present.

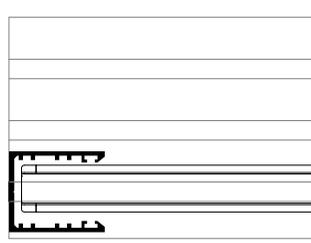

The profile supplied is always 305 cm high, and must therefore be cut to size on site.

**Attention:** if the vertical frame is ordered with a handle without latch and lock, the lock plate to be fixed inside the frame will not be supplied, so the door leaf will no longer fit into the frame by 1 cm but by approximately 3 cm.

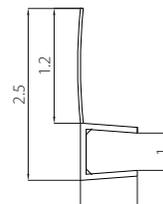

PLATE NOT PRESENT

VERTICAL FRAME WITH LATCH

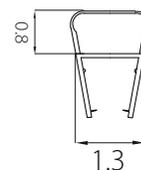

## Transparent PVC profile (optional)

**Attention:** in the standard version no gap gasket is included.

## Balloon-profile gasket (standard)

This gasket (interlocking and to be cut to size) is supplied as standard, if the optional vertical frame was not selected. In this way, the glass will not fit directly against the aluminium of the frame.

## Adhesive balloon-profile gasket

This gasket (adhesive and to be cut to size) is supplied as standard for configurations with a central opening and is to be applied at one of the 2 central door leaves, so that they do not come into contact.

The values indicated are expressed in cm

# MYGLASS FASTENING SYSTEMS

A lock and a locking device can be inserted as optional to stop the doors from the inside and from the outside.

If solutions with lock or latch are not present (see page 40 "door leaf stopper") blocks are supplied, to be fixed to the upper runner to lock the outermost doors.

The position of the handles is at the discretion of the customer; if not specified, they are placed at H 100 cm.

## HANDLES AND LOCKS

Handle, d. 60 mm (standard).

NOTE: for 2 ways 2 doors, 3 ways 3 doors and 4 ways 4 doors systems just one recess is included. For systems with central opening (2 ways 4 doors, 3 ways 6 doors and 4 ways 8 doors systems) 2 recesses are included as standard.

Handle with key  
(against the pillar).

Counter-lock in combination with  
lock for central opening.

## LOCKING SYSTEM WITH LATCH (*optional*)

Available both against the pillar and for central opening (if any)

# AURA

# AURA FEATURES

AURA is a custom-made horizontal sliding system for sun protection, to be installed on Corradi structures and existing structures. This system consists of panels composed of an aluminium frame and aluminium or wood blades, fixed or manually adjustable. The frame can have 2 runners only.

## List of available colours for aluminium:

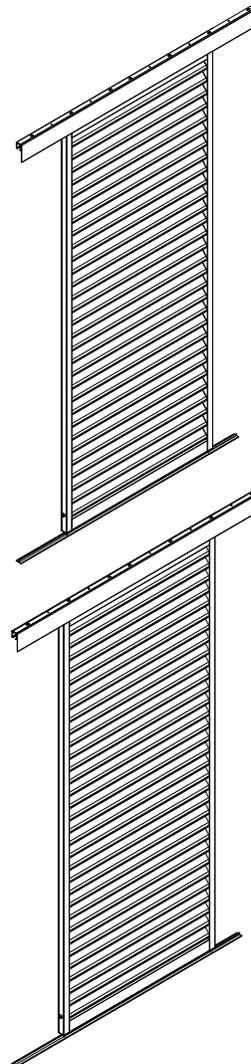

- RAL 9010 White glossy/matt/texture
- RAL 1013 Ivory glossy/matt
- RAL 7035 Grey glossy/matt
- RAL 8019 Brown glossy/text
- Anthracite texture
- RAL 9016 White plus matt
- Dark Bronze texture
- RAL 7016 Dark grey texture
- RAL 9005 Night texture
- Salt & Pepper texture
- Titanium texture
- Cor10 texture
- RAL K7 glossy/matt/texture

- Spring green texture
- Graphite texture
- Dove-grey texture

\*See the Corradi sample kit for other fabrics.

Available with system having 2 runners for 2 or 4 panels.  
 With 2 panels it is possible to close up to 2250 mm.  
 With 4 panels it is possible to close up to 4400 mm.

To close larger openings it is necessary to use several systems adjacent to one another and the intermediate pillar.

## AURA PANEL

### AURA

Aluminium frame and fixed blades in wood

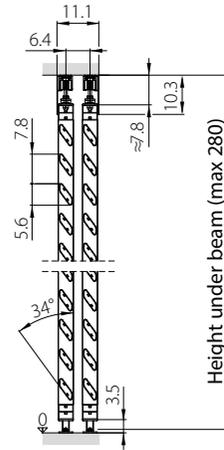

**Maximum height under beam: 2800 mm**

# AURA DIMENSIONS

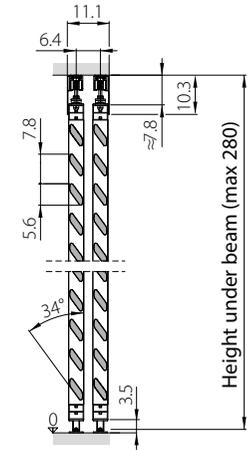

- Bottom runner in anodised aluminium  
 - Adjustable lower runner to use on sliding systems with slope up to 5 cm.

The values indicated are expressed in cm

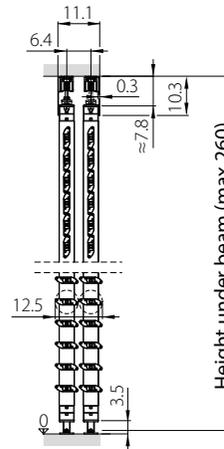

## AURA

Frame and fixed blades in aluminium. Possibility of having the blades in a colour different from the frame.

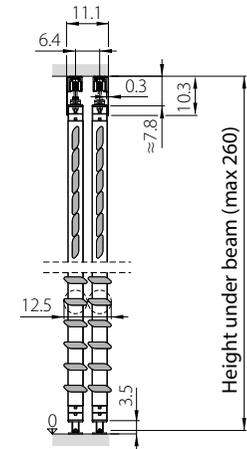

## AURA

Aluminium frame and blades in shrunk ash wood\*.

## AURA

Frame and adjustable blades in aluminium. Independent manual movement of the blades for the upper and lower area of the panel. Possibility of having the blades in a colour different from the frame.

## AURA

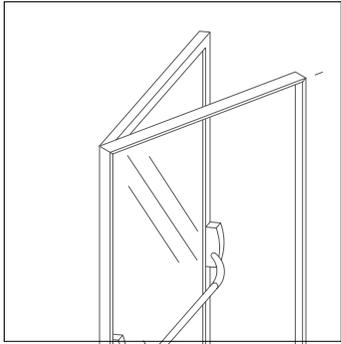

Aluminium frame and adjustable blades in shrunk ash wood\*. Independent manual movement of the blades for the upper and lower area of the panel.

\*If mahogany colour is missing, the wood colour of the blades can be slightly different and a natural greying process will occur over time. To keep the wood in good conditions over time, it must be protected with special products according to the instructions given in the laying manual.

# DOOR WITH PUSH BAR

# DOOR WITH PUSH BAR FEATURES

DOOR WITH PUSH BAR is a control system designed for all installations requiring an easy exit. The door comprises a load bearing aluminium structure and a swinging glass pane. The door is fitted with a push bar, also known as an anti-panic bar, and an external handle with key (external only).

The door can be fitted with a push bar or traditional handle (inside the structure), while the outside is always fitted with a traditional handle with key. Handles and hinges can be finished in one of two colours (black or silver).

The structure is made of extruded aluminium section bars in 6060 alloy. Aluminium structure painted with certified Qualicoat cycle epoxy powders.

The handle and hinge components are always matt black.

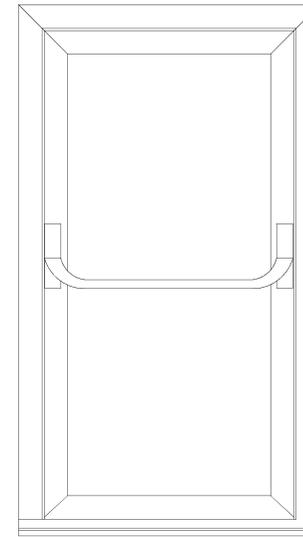

The glass used (in accordance with UNI EN 7697:2007 - SAFETY CRITERIA FOR GLAZING APPLICATIONS) is toughened or safety laminated 6/7 mm (comprising two 3 mm Floats with PVB in between, thickness approx. 6.4 mm). The seal is secured with a double brush seal around the entire perimeter of the frame.

N.B. The door with push bar cannot be used as a safety exit.

## Available colours:

- RAL 9010 White glossy/matt/texture
- RAL 1013 Ivory glossy/matt
- RAL 7035 Grey glossy/matt
- RAL 8019 Brown glossy/text

(20 channel)  
(code 1-GC694400)

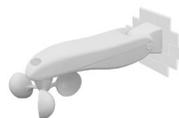

## REMOTE MANAGEMENT VIA APP

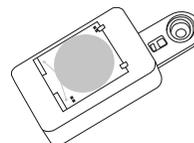

## BTIME

(code 1-GC661400)  
Android device designed to control the movements of the bioclimatic pergola via App.

## SENSORS

Sun/wind sensor, hardwired (min. 5 – max. 70 km/h) (code 1-GC690110)  
Sun/wind sensor, battery (min. 5 – max. 70 km/h) (code 1-GC690100)

Rain gauge kit (code 05437)

## INTEGRATION WITH HOME AUTOMATION

## MIR DCT

(code 05372)  
MIR DCT is the radio transmitter suitable for radio control. There are 3 dry contact inputs for application of control buttons or interfacing buttons with other devices.

## BUTTON CABLE CONNECTION

4-pole extension cable for WIB technology (code GC710400)  
It can be connected directly to home automation or to the WIB M20 rain/temperature sensor.

# SOMFY® IO MOTORS AND AUTOMATISMS - ERMETIKA® XL, DIFFUSA ETK® XL, MAGIKO B E BRIO S

## MODO MOTOR

(cod. 05964)  
Tubular motor with electronic limit switch.  
Art. 1114281

## WHITE LED RECEIVER IO

(cod. 1-GC702600)  
Control for up to 4 white LED sources, dimming.  
No.4 independent outputs.  
Art. 1822611

## SETTING TOOL FOR BIOCLIMATIC PERGOLAS

### SET&GO IO

(code 1-GC704100)  
Installation tool that can be used to make adjustments via computer on Somfy IO applications (**no MacOS**).  
Art. 9017035

This tool is used for programming products, but it cannot replace remote controls for ordinary handling and any subsequent interventions. **It is therefore necessary to purchase 1 or more remote controls.**

## INTEGRATION WITH HOME AUTOMATION

### DRY CONTACT IO

(code 1-GC704400)  
IO radio transmitter capable of controlling all IO receivers. Not compatible with the LED RGB IO system.  
Art. 9018155

## REMOTE MANAGEMENT VIA APP

### TAHOMA SWITCH

(code 1-GC709300)  
Device connected to the home internet network that allows remote control and management of connected devices from Smartphones and tablets via dedicated App.  
Art. 1870594

**ATTENTION: Tahoma Switch and Nina do not allow motor programming, therefore it is always necessary to purchase at least one remote control.**

## SENSORS

### EOLIS IO 230V

(code 1-GC703200)  
Façade sensor powered at 230V-50Hz for protection of the bioclimatic pergola in case of wind.  
Art. 1816092

### EOLIS IO WIREFREE

(cod. 1-GC703500)  
Façade sensor for protection of the product in case of wind.  
Battery-powered sensor.  
Art. 1816084

### SOLIRIS IO 230V

(code 1-GC703300)  
Façade sensor powered at 230V-50Hz to control the automatic closure of the bioclimatic pergola in case of wind and according to light intensity (sun).  
Art. 1870532

### ONDEIS 230V

(cod. 1-GC703600)  
Rain detection device powered at 230V-50Hz. DRY CONTACT IO or Eolis IO 230 V transmitter required.  
Art. 9016345

### THERMIS WIREFREE IO

(cod. 1-GC703700)  
Wireless temperature sensor. It must be coupled with Tahoma Switch.  
Art. 1822303

### SUNIS WIREFREE IO II

(cod. 1-GC703800)  
Wireless sun threshold sensor. It must be coupled with Tahoma Switch, Nina, or Situo 5 Var.  
Art. 1818285

## RADIOCOMANDI

### Situo 1 IO Pure

(1 channel)  
(code 05963-1PUR)  
Art. 1870314

### Situo 1 IO Iron

(1 channel)  
(code 05963-1TIT)  
Art. 1870318

### Situo 5 Var A/M IO Pure

(5 channel)  
(code 1-GC702800)  
Art. 1870371

### Nina IO

(60 channels – 30 units)  
(code 1-GC702900)  
Art. 1805251
